Vaccine Data – updated through 6/11/2021

Montana began vaccinating individuals in mid-December 2020 with a phased process: Phase 1A on December 14, 2020, Phase 1B on January 19, 2021, and Phase 1B+ on March 8, 2021. Vaccinations were opened to all Montanans age 16+ on April 1, 2021 and expanded to all Montanans age 12+ on May 10th, 2021. To date 838,246 doses have been given across the state and 45% of the eligible population are considered fully vaccinated.

COVID-19 Vaccine Doses Administered – Montana, as of 6/11/2021

	NUMBER	PERCENT OF ELIGIBLE POPULATION	THIS WEEK	PERCENT CHANGE FROM PREVIOUS WEEK
TOTAL DOSES ADMINISTERED	838,246		11,520	-0.9%
DOSE 1 ADMINISTERED	459,837	50%	3,933	-22.6%
FULLY VACCINATED INDIVIDUALS	411,195	45%	7,587	-2.0%

Variant and Breakthrough Cases

A variant has one or more mutations that differentiate it from other viral strains in circulation. Multiple variants of SARS-CoV-2 have been documented throughout this pandemic. To date, 393 variants of concern have been identified in Montana. The most common variant identified (66% of specimens) is B.1.1.7 (UK strain).

A breakthrough COVID-19 infection is defined as a positive SARS-CoV-2 collected ≥ 14 days after completing the primary COVID-19 vaccine series of an FDA-authorized COVID-19 vaccine. Depending on the specific vaccine administered, completion of series could be one or two doses of vaccine. As of 6/11/2021, 253 cases of confirmed breakthrough disease were reported, including 27 hospitalizations and three deaths.
